VITAL STATISTICS

OF THE PROVINCE OF BRITISH COLUMBIA

ONE HUNDRED AND NINTH REPORT

FOR THE YEAR

1980

Queen's Printer for British Columbia ©
Victoria, 1983

VICTORIA, B.C., DECEMBER 15, 1982

*To Henry P. Bell-Irving, D.S.O., O.B.E., E.D.,
Lieutenant Governor of the Province of British Columbia.*

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present the Report on Vital Statistics in the Province of British Columbia for the year 1980.

J. A. NIELSEN
Minister of Health

MINISTRY OF HEALTH,
VICTORIA, B.C., DECEMBER 15, 1982

*The Honourable J. A. Nielsen,
Minister of Health,
Victoria, B.C.*

SIR: I have the honour to submit the One Hundred and Ninth Report on Vital Statistics in the Province of British Columbia.

I have the honour to be,

Sir,

Your obedient servant,

PETER BAZOWSKI
Deputy Minister of Health

DIVISION OF VITAL STATISTICS,
VICTORIA, B.C., DECEMBER 15, 1982

*Peter Bazowski,
Deputy Minister of Health, Victoria, B.C.*

SIR: I have the honour to submit the One Hundred and Ninth Report on Vital Statistics in the Province of British Columbia for the year ended December 31, 1980.

I have the honour to be,

Sir,

Your obedient servant,

A. H. HERSOM
Director of Vital Statistics

VITAL STATISTICS REPORT, 1980

INTRODUCTION

This Report is divided into three parts. Part I is an administrative report of the activities of the Division, covering both registration and statistical functions, in the year under review. Part II presents summarized serial tables, showing trends over periods of varying lengths, usually accompanied by rates or percentages. Part III presents further detailed analysis of the current year's data.

The data on births and deaths in Parts II and III in most cases relate to residents of the Province and are generally classified by *place of residence*. Where data by place of occurrence are shown, the table headings make this clear. As marriages involve the places of residence of two persons, it is the custom to show marriage data by place of occurrence, a custom which is followed in this Report.

In connection with cause of death, comparability between years is affected by major classification changes introduced in 1950 and 1969. In 1950 a major change in the death classification system took place with the implementation of the Sixth Revision of the International Statistical Classification of Diseases, Injuries, and Cause of Death which was designed for classification of both mortality and morbidity.

In 1969 a further major change in classification occurred with the implementation of the Eighth Revision. Certain categories such as mental disorders, cardiovascular diseases, perinatal conditions, and syphilis were subject to considerable revision. Also certain categories of external cause of accidents were expanded to provide more detail. The Ninth Revision was brought into use in 1979 and while it incorporated some changes, these were not as extensive as with the previous revisions. The code numbers of both the Eighth and Ninth Revisions are presented in the serial mortality tables of Part II.

The aforementioned serial tables do not reflect the adjustments resulting from the querying of original cause of death information by the medical coder for the years 1974-1977, because these adjustments were inadvertently omitted from the computer data from which the printed tables were produced. Similar discrepancies arising from the same cause, are reflected in the 1974, 1975, 1976 and 1977 reports. Readers who are interested in obtaining amended totals for specific diagnostic categories should contact the Division of Vital Statistics.

Before 1968, vital statistics data for Indians were presented in terms of *racial origin* only, but it was found that rates calculated on this basis were unreliable because of the recognized weakness of available population estimates for racial Indians. In all tables which present vital statistics rates for Indians, the figures are now presented in terms of *registered* Indians, i.e., Indians by legal status, living on or off reserves. In the reports for the years 1968 to 1973 data were presented separately for *registered* and *racial* Indians in selected tables of Part III.

The Appendix Table presents the cause of death by sex and age according to the detailed list of the International Statistical Classification. Elsewhere in the Report, some mortality data are classified according to the Intermediate List of the Classification.

In 1971 the 46 census subdivisions were replaced by 29 regional districts as the standard geographical divisions of the Province for census and related purposes. The new divisions first appeared in selected tables of Part III in the 1971 Report, and are uniformly adopted in the current Report wherever geographical divisions are presented, except in the case of the table showing health jurisdiction statistics, which was added commencing with the 1977 report, and the table showing statistics of Vital Statistics Registration Districts, added commencing with the 1978 report.

PART I—REPORT OF THE ACTIVITIES OF THE DIVISION, 1980

SUMMARY

The Division of Vital Statistics performs two major functions in the Health Ministry. One of these is to administer the Province-wide vital statistics registration system while the other is to provide a centralized biostatistical service to various divisions of Community Health Services, and to certain voluntary health agencies.

The Division is required to administer the *Vital Statistics Act*, the *Marriage Act*, and the *Name Act* and to operate a registry of wills notice under the *Wills Act*. These vital statistics registration services are available to the public through the central office in Victoria and district offices and suboffices located in the main population centres throughout the Province. These are shown in Table 1 on page 5.

In order to carry out its extensive statistical responsibilities, the Division employs a staff of trained biostatisticians and statistical clerks located in Victoria and Vancouver, as well as trained specialists in the Ministry's data processing service and in the Ministry's integrated data control functions, who serve both aforementioned major functions of the Division.

REGISTRATION SERVICES

ADMINISTRATION OF THE VITAL STATISTICS ACT

A very substantial part of the Division's responsibilities is connected with the administration of the *Vital Statistics Act*, which governs the registration of births, stillbirths, marriages, deaths, adoptions, and divorces, as well as the issuance of information and certificates based on registrations filed.

The Division received excellent co-operation from hospitals in arranging for the registration of births by mothers during confinement, and in the submission of monthly returns of births in hospital. Very good co-operation was also received from physicians, lawyers, funeral directors, ministers of religion, government agencies, and the general public in maintaining the timeliness and quality of registrations.

TABLE 1—REGISTRATION DISTRICTS, LOCATION OF OFFICES, AND DESIGNATION OF APPOINTEES, AS AT DECEMBER 31, 1980

Registration District and Location of Offices	Designation of Appointee	Registration District and Location of Offices	Designation of Appointee
ABBOTSFORD	Private Individual.	NAKUSP (e)	Court Clerk.
ALBERNI	Government Agent.	NANAIMO	Government Agent.
ALERT BAY	Private Individual.	NATAL (f)	(See Fernie)
ASHCROFT	Government Agent.	NELSON	Government Agent.
ATLIN	Government Agent.	NEW DENVER (e)	Private Individual.
BARKERVILLE (a)	(See Quesnel)	NEW WESTMINSTER	Government Agent.
BURNS LAKE	Government Agent.	Langley	Private Individual.
CAMPBELL RIVER	Government Agent.	White Rock	Registrar of Voters.
CASSIAR	Private Individual.	NORTH VANCOUVER	Private Individual.
CHEMAINUS	Municipal Clerk.	OCEAN FALLS (g)	Government Agent.
CHETWYND	Government Agent.	Bella Bella	Private Individual.
CHILLIWACK	Government Agent.	OLIVER	Government Agent.
CLAYOQUOT (b)	Government Agent.	100 MILE HOUSE	Government Agent.
Gold River	Municipal Clerk.	PENTICTON	Government Agent.
Tahsis	RCMP.	POUCE COUPE (h)	Government Agent.
CLINTON	Government Agent.	POWELL RIVER	Government Agent.
COURTENAY	Government Agent.	PRINCE GEORGE	Government Agent.
CRANBROOK	Government Agent.	PRINCE RUPERT	Government Agent.
CRESTON	Government Agent.	PRINCETON	Government Agent.
DUNCAN	Government Agent.	QUATSINO (i)	Government Agent.
ENDERBY	Municipal Clerk.	Quatsino	Private Individual.
FERNIE	Government Agent.	QUEEN CHARLOTTE	Government Agent.

FORT ST. JAMES	Government Agent.	QUESNEL	Government Agent.
FORT ST. JOHN	Government Agent.	REVELSTOKE	Government Agent.
GANGES	Government Agent.	ROSSLAND	Government Agent.
GOLDEN	Government Agent.	SALMON ARM	Government Agent.
GRAND FORKS	Government Agent.	SLOCAN CITY (e)	Municipal Clerk.
GREENWOOD (c)	Municipal Clerk.	SMITHERS	Government Agent.
HANEY	Municipal Clerk.	SQUAMISH	Government Agent.
HOPE	Private Individual.	STEWART	Government Agent.
HOUSTON	Government Agent.	SUMMERLAND (j)	(See Penticton)
INVERMERE	Government Agent.	TELEGRAPH CREEK	Private Individual.
KAMLOOPS	Government Agent.	Dease Lake	Private Individual.
KASLO	Government Agent.	TERRACE	Government Agent.
KELOWNA	Government Agent.	TRAIL (k)	(See Rossland)
KIMBERLEY	Municipal Clerk.	Castlegar	Private Individual.
KITIMAT	Government Agent.	VANCOUVER	Vital Statistics personnel.
LADYSMITH	Municipal Clerk.	Sechelt	Government Agent.
LILLOOET	Government Agent.	Gibsons	Municipal Clerk.
LYTTON	Private Individual.	VANDERHOOF	Government Agent.
MACKENZIE	Government Agent.	VERNON	Government Agent.
McBRIDE (d)	Private Individual.	VICTORIA	Vital Statistics personnel.
McBride	Municipal Clerk.	WILLIAMS LAKE	Government Agent.
MERRITT	Government Agent.		
MISSION	Private Individual.		

The capitalized names are the names of legally defined districts, while the names in small letters indicate the locations of suboffices.

With few exceptions, registration districts are administered by District Registrars, and suboffices by Deputy District Registrars. The exceptional cases are included among the following footnotes:

- (a) The District Registrar for Quesnel District administers the Barkerville District directly.
- (b) The Clayoquot District main office is located at Ucluelet.
- (c) The District Registrar for Grand Forks District administers the Greenwood District through a Deputy District Registrar.
- (d) The McBride District main office is located at Valemount.
- (e) The District Registrar for Nelson administers the Slocan, Nakusp and New Denver Districts through Deputy District Registrars.
- (f) The District Registrar for Fernie District administers the Natal District directly.
- (g) The Ocean Falls District main office is located at Bella Coola.
- (h) The Pouce Coupe District main office is located at Dawson Creek.
- (i) The Quatsino District main office is located at Port Hardy.
- (j) The District Registrar for Penticton administers the Summerland District directly.
- (k) The District Registrar for Rossland administers the Trail District directly.

Volume of Registrations

The number of births, deaths, marriages, and stillbirths in Table 2 are related to the year of filing of registrations with the Division, hence will not necessarily coincide with those in Part II or Part III, which are related to the year of occurrence. In the case of adoptions, divorces, and wills notices, all figures in this Report are presented in terms of the year of filing with the Division.

TABLE 2—SUMMARY OF REGISTRATIONS, BRITISH COLUMBIA, 1936-80

Year	Live Births	Deaths	Marriages	Stillbirths	Adoptions	Divorces ¹	Wills Notices	Total

1980	968,049.16	794,352.16	173,697.00

Registration of Births

The responsibility for filing the completed registration of the birth of a child with the appropriate district registrar lies with the parent. The attending physician is required by law to report the birth within 48 hours of the event, although this reporting does not constitute registration. The number of birth registrations filed with the Division in 1980 was little changed over 1979, although births occurring in 1980 increased by over four per cent.

Legitimations—Under the *Legitimacy Act*, a child born out of wedlock is deemed to have been legitimate from birth once its natural parents have intermarried. The *Vital Statistics Act* provides that under such circumstances a new registration may be substituted for the registration originally filed, the new registration showing the child to be legitimate. However, satisfactory evidence of paternity must be first provided.

There were 260 births legitimated in 1980, compared with 289 in 1979.

Alteration to given names—Under section 8 of the *Vital Statistics Act*, a change made in a child's name before the age of 12 years may be entered on the birth registration by means of a notation.

Alterations of given names in 1980 numbered 337, as compared with the 1979 figure of 372.

Delayed registrations of birth—Special provision is made in the *Vital Statistics Act* for registration of a birth more than one year after the event. There were 255 delayed registrations of births processed during 1980, compared with 320 in 1979.

Fraudulent and improper registrations—The *Vital Statistics Act* makes provision for the cancellation of a registration of birth which has been fraudulently or improperly obtained.

Registrations cancelled as fraudulent or improper numbered 71 in 1980, as compared with 46 in 1979.

Registration of Deaths

The physician in attendance at the last illness of a deceased person, or the Coroner conducting an inquiry into the death of a person, is required to complete the Medical Certificate of Cause of Death, which forms an important part of the death registration. The responsibility for filing the completed death registration with the appropriate district registrar lies with the undertaker in charge of the burial, and the registration must be filed before the necessary burial permit is issued.

Classification of deaths for statistical purposes is made according to the International Statistical Classification of Diseases, Injuries, and Causes of Death, and this classification is based upon the physician's certification. Where there is doubt as to the cause to which the physician wishes the death assigned, he is queried by the Division's Medical Coder.

As indicated in the Introduction, the Ninth Revision of the International Classification of Diseases was adopted by this Province in 1979, in common with the other provinces of Canada and a number of other countries.

Registration of Stillbirths

The term "birth" where used in the *Vital Statistics Act* includes stillbirths, but separate forms are used for stillbirth registration. These forms combine the essential features of both birth and death registrations. In the revised *Vital Statistics Act* of 1962, the definition of a stillbirth reads as follows: "The complete expulsion or extraction from its mother, *after at least twenty weeks' pregnancy*, of a product of conception in which, after such expulsion or extraction, there is no breathing,

beating of the heart, pulsation of the umbilical cord, or unmistakable movement of voluntary muscle."

There were 294 stillbirth registrations filed in 1980.

Registration of Marriages

The responsibility for registering a marriage rests with the person solemnizing the event, namely, the officiating clergyman or Marriage Commissioner.

Marriage registers are provided free of charge to clergymen and Marriage Commissioners. These are returned to the Division periodically in order that they may be checked against the indexes of registrations filed with the Division. If it is thus ascertained that an event has been unrecorded, steps are promptly taken to obtain a registration.

Registration of Adoption Orders

Copies of all adoption orders made by the Courts in this Province are forwarded to this Division by the Court Registrars, as required by the *Vital Statistics Act*.

On receipt of an order regarding an adoption by the Division, a marginal notation showing the child's adoptive name is made on the original registration. All certificates subsequently issued in respect of the registration bear this name. No information regarding the natural parents of the child may be released. This same procedure is followed when an adoption order is received from another province or state relating to the adoption of a child born in British Columbia.

Inspection of the documents filed regarding an adoption is only allowed to officials of the Crown in discharge of their official duties, or to a person authorized by the Provincial Secretary in writing, or to a person authorized by a Judge of the Court presiding in Chambers. Thus every effort is made to protect the interest of the adopted child and his adoptive parents.

Adoption orders filed with the Division in 1980 numbered 2,176, as compared with 1,558 in 1979.

Registration of Divorce

The *Vital Statistics Act* also requires that all divorces and nullities granted in the Province be filed with the Division. The Division is supplied with a certified copy of each decree of dissolution or nullity by the Supreme Court Registrars.

There were 9,576 dissolutions of marriage and 10 nullities filed with this Division in 1980. The comparable figures for 1979 were 8,271 dissolutions and 12 nullities.

ADMINISTRATION OF THE NAME ACT

The *Name Act* (formerly the *Change of Name Act*) provides a means whereby persons may change either their given names or their surnames and the names of their minor children upon meeting certain requirements set forth in the Act. The Act expressly forbids changes of name which are not made in accordance with its provisions, but exempts changes of name resulting from marriage, adoption, or legitimation, or changes in the given name of a child made under the *Vital Statistics Act* and prior to the child's 12th birthday. Amendments passed in March and September 1977, provide for the formal adoption by a married woman of her maiden surname or other surname held prior to her present marriage.

During 1980, 3,839 change of name applications were effected, as compared to 3,823 changes in the previous year. Many of these applications covered several members in a single family, so that in total 4,551 individuals were affected. Thirty-six per cent of the applications were made by divorced women, while an additional 20 per cent were made by married men, 16 per cent by married women, and 11 per cent by each of single men and single women.

¹ Includes two cases for which marital status was not stated.

² Includes four cases for which marital status was not stated, three male and one female.

³ Includes one case for which marital status was not stated.

ADMINISTRATION OF THE MARRIAGE ACT

The *Marriage Act* prescribes the legal requirements which must be observed in connection with the solemnization of marriage, the legal qualifications of individuals to marry, and the authorization of ministers and clergymen and of Marriage Commissioners to perform the marriage ceremony. Under this Act the Division of Vital Statistics is required to license ministers and clergymen of established religious denominations who desire the authority to solemnize marriage. It is also

the responsibility of the Division to recommend for appointment Issuers of Marriage Licences throughout the Province and to supervise their work. The actual registration of marriages solemnized and the issuance of marriage certificates are governed by the *Vital Statistics Act*.

On December 31, 1980, there were 3,195 ministers and clergymen authorized to solemnize marriage. During the year, 420 resident clergymen and ministers were licensed, while 321 licences for those residing in the Province were cancelled due to transfer out of the Province or due to death. In addition, 151 temporary licences were issued to nonresident ministers and clergymen who were ministering in the Province for brief periods only, and 148 such licences were cancelled.

Thirty-seven orders of remarriage were issued under the *Marriage Act* in 1980.

REGISTRY OF WILLS NOTICES

The Registry of Wills Notices maintained by this Division under the *Wills Act* makes it possible for a testator to file with this Division a notice stating that he has executed a will, and indicating where the will is deposited. The filing of a wills notice is not mandatory, but provides a convenient means of ensuring that information which will lead to the discovery of the will should be readily available after death. Adequate identifying information respecting the testator, such as date and place of birth, must be included in the wills notice.

In 1946, the first complete year in which notices were filed, there were only 441 notices received. The figures for the last six years show the increasing use of the service by the public, apart from the slight drop in 1978. They are as follows: 1975, 37,295; 1976, 40,877; 1977, 46,611; 1978, 46,217; 1979, 50,854, and 1980, 53,750. Wills notice certifications numbered 13,066 in 1980, compared to 12,374 in 1979.

MICROFILM AND PHOTOGRAPHIC SERVICES

All registrations of births, deaths, marriages, and stillbirths, together with delayed registrations and amended registrations, were microfilmed weekly up to July 1979. The film was forwarded under contract to Statistics Canada, where it was processed and positive rolls printed for their own use, after which the negative rolls were returned to this Division. Since July, 1979, the processing of films has been undertaken locally and positive rolls transmitted to Statistics Canada. The positive rolls are used by Statistics Canada in the compilation of national vital statistics and the national indexes of births, deaths, and marriages.

In addition, the following documents are filmed on a continuing basis: Physician's Notice of Birth, wills notices, adoption notices, change of name files, and various supplementary records which the Division is required to file under the *Vital Statistics Act*.

Extensive use is also made of the microfilm and photographic unit to provide photoprints of vital statistics registrations and other documents in connection with the administration of the Acts. In 1980, 68,572 photographic and copy machine prints were issued free of charge to government agencies, including a small number required for use by this office. In addition, 14,850 photographic prints were issued as certified copies at a charge of \$2 per copy, as prescribed in the *Vital Statistics Act*.

BIostatistical Services

GENERAL

Research offices in Victoria and the Health Surveillance Registry in Vancouver, under the supervision of the assistant director, provided a wide range of statistical information as well as extensive collaborative and independent research. Recipients of these services included divisions within Planning and Development Services, sectors of Community Health Services, other sectors of the provincial and federal governments, universities and hospitals, and members of the general public.

DATA PROCESSING

This was the first year annual runs were accomplished on the Honeywell computer following the 1979 conversion of the 35 divisional information systems by B.C.S.C. from the IBM to the Honeywell mainframe computer. Special maintenance and extra study was required among the more complicated systems (e.g., the legal registers and the Health Surveillance Registry), but, except in the case of the community care system, service was not disturbed to any appreciable extent despite the conversion.

DENTAL HEALTH

A great deal of assistance was given to Dental Health Services in the execution of a province-wide children's dental health survey. Ten thousand children were sampled from 12 different areas and detailed dental charts were created for each child. Data was analyzed and a comprehensive report was being prepared at the year end.

HEALTH SURVEILLANCE REGISTRY

The Health Surveillance Registry office in Vancouver received approximately 15,500 reports of cases in 1980. Fifty-six per cent of these were reports on new cases of birth and genetic defects, the remainder being follow-up reporting on cases which were already on file. A major task, the conversion of the medical codes on particular cases from the eighth to the ninth revision of the International Classification of Diseases, was completed during this year and a paper was published in Medical Informatics concerning the methodology inherent in converting such a large historical file. The Registry office in Vancouver was moved by the B.C. Building Corporation from the Public Health building to 660 West Seventh Avenue. A report for year-end statistics for 1978 for the Registry was published and distributed.

The Cancer Register, a longtime responsibility of the Division of Vital Statistics, was transferred to the Cancer Control Agency of B.C. as of April 1, 1980. A statistical report of cancer in B.C. for 1977 was produced and distributed to interested clinicians and agencies.

The Health Surveillance Registry provided information in a number of areas, including statistics on the prevalence of mental retardation, data on rubella syndrome, foetal alcohol syndrome, as well as on a variety of genetic conditions including Huntington's Chorea and Down's syndrome. It provided prevalence statistics regarding the full range of disabilities for particular parts of the province for concerned agencies, both within and beyond the confines of the Ministry. A sample from some 35 subjects on which the Registry was called upon to contribute follows: provincial handicapped study, Usher's syndrome, multiple sclerosis, arthritis, diabetes, cerebral palsy, musculorum deformans, an amniocentesis regis-

ter, X-linked mental retardation, pyloric stenosis, neural tube defects, retinitis pigmentosa, frequency of the coincidence of visual and hearing impairment, etc. The growing interest in monitoring and surveillance of birth defects, and also of chronic and handicapping diseases, continued, with requests for information from 15 other geographical locations. This was a reflection of the wider recognition that the Registry has achieved beyond the province. UNICEF, an agency of the United Nations, made one of these inquiries.

INTEGRATION

In 1980, the research and data processing sections were relocated adjacent to other Ministry research and data processing services. This required a change of technology from IBM card machines to Mohawk key-on-tape methods. Data control functions of the Division were also integrated with Ministry data control functions in the Victoria offices. These moves and changes necessitated considerable adjustment regarding communication and function but did not delay the Division's essential services to the public.

PERINATAL MORBIDITY AND MORTALITY

The research section contributed to the Perinatal Program of B.C. through an executive member on the continuing advisory sub-committee. Concerns in 1980 included the high rate of caesarian section, Sudden Infant Death Syndrome, teenage pregnancy, low birth-weight babies, and perinatal mortality. The prevention of stillbirths was the subject of two articles published in the B.C. Medical Journal. A new revision of the Physician's Notice of Birth was introduced on January 1, 1980, and the data provided on this form is used to assess the validity of information which is being provided on abortion, and on the stimulation of respiration immediately after birth. A standard package of perinatal records to be used by physicians throughout the province was devised and was under development at the year end.

SPECIAL PROJECTS

Individual Research Officers gave service to the Inter-Ministerial Children's Committee, the Health Record Administration Project, and to the Task Force on Geocoding and Geographic Boundaries.

An evaluation of the Kelowna Coronary Exercise Group produced neutral or positive answers to the questions asked of this study. The final report of this study of the effects of a defined exercise program upon cardiac patients was under consideration in December. A previous program evaluation concerned with parenting roles was presented to the Canadian Psychological Association.

TUBERCULOSIS CONTROL

The Victoria office maintained files on some 97,000 individuals who have had tuberculosis or who are at high risk of getting this disease. Indexes and an annual statistical report were produced, as well as information relevant to a number of research questions, such as the association of tuberculosis to the condition of silicosis.

VENEREAL DISEASE CONTROL

Monthly and annual reports were compiled and presented to the Division of Venereal Disease Control.

VITAL STATISTICS

Statistics derived from the vital statistics registration system were compiled in collaboration with Statistics Canada. A substantial part of the resulting tabulations appears in the relevant Annual Report of Vital Statistics, while some unpublished data are available on request.

WATER QUALITY STUDIES

Three studies concerning water quality reached completion in 1980. One of these studies monitored the effects of treatment facilities on the bacteriological content affecting the water in the Columbia-Kootenay Rivers in the Trail-Nelson area over a period of 12 months. A second study of the bacteriological content of water at the major bathing beaches in the Okanagan Basin was done in collaboration with the Okanagan Basin Implementation Board. The report identified sources of contamination and other problems that diminish the quality of the bathing beaches. A third study concerning the water in Christina Lake was completed in response to local concern over the effects of growth and development around the lake. This study, done in collaboration with the Ministry of Environment, and the Regional District of Kootenay Boundary, analyzed the bacteriological, chemical and biological aspects of the water and additionally obtained information on sewage disposal practices, aquatic plant infection, and residency patterns.

OTHER SERVICES

The staff of the research office in Victoria fulfilled a heavy demand for perinatal and mortality information, based on information that is provided to the Division by the registration of vital events. They offered consultation services in the areas of the feasibility of particular research problems, as well as in the design and planning of particular studies being attempted by health officers, health educators, nutritionists, and others, including those in the Division of Occupational Health. They assisted in the improvement of research applications, as well as in the correction and improvement of other ministry and government files, through the provision of regular lists and statistics pertaining to vital files. They performed a study to assess the appropriateness of Table Producing Language (TPL), a computer "package" which can be used by research officers to analyze and create tabulations of vital events.

Reports and tabulations were regularly provided to Statistics Canada, the Drug and Poison Information Centre, medical health officers on the status of communicable diseases, public health inspection, public health nursing, Home Care, the G.F. Strong Centre, and Community Care. The office maintains a rheumatic fever prophylaxis register for use by private physicians through the local health district office.

The Research Office responded to a diverse number of requests and inquires for vital and population data from the general public.

**PART II—TREND TABLES WITH RATES
(By Place of Residence)**

PROMINENT FEATURES

There were 2,640,100 people in the Province at the middle of 1980, an increase of 2.7 per cent over the 1979 figure. This was a higher rate of increase than has been recorded in the past few years.

The *birth rate* in 1980 was 15.2 per 1,000 population. The 1979 rate was 14.9 and this year's figure is the third increase since 1976. *Illegitimate births* represented 15.6 per cent of total births, a record high.

The *marriage rate* was higher this year at 9.0 per 1,000 population. Last year's figure was 8.6.

Another record low *death rate* was recorded in 1980, there being 7.3 deaths per 1,000 population. This was a continuation of the decline which started in 1975.

Heart disease continues to cause the largest number of deaths in the Province but the mortality rate from this cause was down this year to 237.1 per 100,000 population. Last year's figure was 239.7. The second leading cause of death in 1980 was *malignant neoplasms*. The *death rate* this year was 171.4, an increase over the 1979 figure and a continuation of the increases registered since 1973. *Cerebrovascular lesions of the central nervous system* recorded a rate of 68.7 deaths per 100,000 population in 1980, down from the previous year's figure of 73.9. Mortality from *accidents* was at a low level this year, the rate being down to 60.8 from last year's figure of 66.7. The *suicide rate* was also down, 15.0 compared to 16.3 in 1979.

The decline in the *infant mortality rate* per 1,000 live births continued this year, the rate being down to 11.0. Last year's figure was 11.3.

LONG-TERM TRENDS OF POPULATION AND VITAL EVENTS

TABLE 9—POPULATION BY SEX AND AGE-GROUP, BRITISH COLUMBIA, 1901-80

NOTE—Cause of death adjustments resulting from medical coder's queries are not reflected in this table for the years 1976-1977. See Introduction.

DEATHS FROM ACCIDENTS AND VIOLENCE

In order to obtain as much information as possible regarding deaths from accidents and violence, a dual coding is used. These deaths are classified according to the *external cause* and also according to the *nature of the injury*. Statistics showing both types of classification are presented in the detailed tables in Part III of this Report.

TABLE 20—RATES OF DEATH FROM ACCIDENTS AND VIOLENCE, BY EXTERNAL CAUSE, BRITISH COLUMBIA, 1976–80

(Rates per 100,000 population)

Ninth Revision, Intermed. Int. List No. ¹	Eighth Revision, Intermed. Int. List No. ²	External Cause of Death	1976		1977		1978		1979		1980	
			No.	Rate	No.	Rate	No.	Rate	No.	Rate	No.	Rate
